

-  HIGH SPEED/
ACCELERATION
-  HIGH DEBRIS
-  ROTARY
-  FLEXIBILITY
-  MULTI-AXIS

THE TOTAL PACKAGE

Motion systems which reduce total cost of ownership and increase longevity for automated packaging.

Bishop-Wisecarver guides and actuators provide high speed, high acceleration, and high durability. Our self-cleaning vee guide wheel technology wipes away dust and debris – well-suited for cutting, cartoning, and operations requiring reliable uptime.

LoPro® and PDU2 linear actuators are capable of high speeds, extreme lengths, and easy assembly into multi-axis or gantry configurations.

DualVee®, UtiliTrak®, and HepcoMotion® GV3 are smooth-running and highly versatile guidance components that every packaging machine designer should have in their toolbelt.

HepcoMotion® PRT2 disks and large open center rings provide rotary motion for orbital wrapping, slewing in bottling operations, and more.

Bishop-Wisecarver also offers a range of motion circuits for high throughput product transfer:

GFX: Highly programmable, independently moving carriages for maximum flexibility and near instant changeover

PRT2: Versatile track circuits that can be configured in nearly any shape

DTS / DTS2: Driven track systems with high speed linked carriages
